# About Us

Source Group provides specialist recruitment, waiting list management and software solutions that lead to sustained, tangible change. Having worked in, and with, the NHS for years, we know the value of having specialists who work as trusted partners, not just transactional suppliers. So we focus on creating **flexible, sustainable and pragmatic solutions** in collaboration with our clients to **build lasting internal knowledge, resource and capability**.

We are a technology and resourcing partner with over 17 years' experience of working with providers to deliver technology and staffing/project solutions. We provide flexible recruitment solutions, business intelligence and information management specialists or outcome-based project teams into healthcare/NHS and commercial markets. Using our own unique technical assessment platform (ITAP), we assess every candidate's skills to improve the shortlisting process and save our clients' time.

“ ... they always take the time to really understand our requirements...”

Source Care secures and provides consistent, high quality agency workers that have real training and certification, often at very short notice. We provide fully trained, professionally vetted and qualified specialist care staff, from support workers, healthcare assistants and supported housing officers, to RMNs and RGNs, on a permanent, contract or ad-hoc agency basis. Our Source Academy provides in house training to help care staff secure their NVQs and ensure career progression in terms of pay rates and education.

# SOURCE RTT

Patients • Pathways • Performance

Source RTT provides end-to-end solutions to manage patient pathways and referral to treatment (RTT) within healthcare, including waiting list management, data validation, standard operational procedures, CPD accredited training, software and consultancy to develop best practice. We provide sustainable solutions to tackle validation and data issues at source and build internal capability. Our dedicated team have over 30 years' depth and breadth of knowledge and expertise in waiting list management and 18 weeks RTT, as well as over 50 years' NHS experience working in numerous trusts in a range of clinical, non-clinical and managerial roles (operational and performance) including RTT Leads, Patient Access Managers, RTT Validators and Data Cleaners.

# SOURCE >> MIGRATE

Data • Quality • Performance

Because PAS/EPR migrations can significantly impact data quality, we have developed a complete 18 weeks RTT solution to work in tandem with trusts' migration needs to ensure patient safety is safeguarded and assured. We can assist at any milestone throughout the migration – if a migration has recently been completed, we can support any resulting RTT pathway validation needs, or we can work with clients from the procurement stage to ensure RTT pathways are embedded alongside the migration. Our team all have experience of data analysis, PAS implementations and data migrations, including the management of data quality issues pre- and post-go live. We can also provide all of the resource for go live support including Trainers, Floorwalkers and Data Migration Analysts/Testers, all with relevant RTT training.

# SOURCE APPS

Data Driven Performance

With over 30 years' NHS knowledge and experience, we know that data is one of the most important assets any NHS organisation has. We provide cloud-based business intelligence and data analysis applications to enable effective decision-making and performance monitoring for both the secondary/acute and commissioning/primary care sectors. Our team is led by a BI consultant who has developed many highly successful solutions for multiple NHS trusts and commissioners, many of which are still in use, years on – and five of which have been rolled out across 28 CCGs in England.
